Преподаватель: Е. С. Миронов

Москва, 2025

Условие

Консоль-серверная игра. Необходимо написать консоль-серверную игру. Необходимо написать 2 программы: сервер и клиент. Сначала запускается сервер, а далее клиенты соединяются с сервером. Сервер координирует клиентов между собой. При запуске клиента игрок может выбрать одно из следующих действий (возможно больше, если предусмотрено вариантом): • Создать игру, введя ее имя • Присоединиться к одной из существующих игр по имени игры

Цель работы

1. Приобретение практических навыков в использовании знаний, полученных в течении курса
2. Проведение исследования в выбранной предметной области

Задание

Необходимо спроектировать и реализовать программный прототип в соответствии с выбранным вариантом. Произвести анализ и сделать вывод на основании данных, полученных при работе программного прототипа.

Задание варианта

Морской бой. Общение между сервером и клиентом необходимо организовать при помощи memory map. Каждый игрок должен при запуске ввести свой логин. Должна быть предоставлена возможность отправить приглашение на игру другому игроку по логину

Вариант

6

Архитектура проекта

Архитектура проекта реализует клиент-серверную модель с использованием разделяемой памяти (shared memory) для межпроцессного взаимодействия. Система состоит из трёх ключевых компонентов, определённых в файлах проекта:

- **Сервер** (`Server.hpp`, `Server.cpp`) — центральный координатор, который управляет всеми игровыми сессиями, обрабатывает команды клиентов и поддерживает целостность игрового состояния. Сервер работает в бесконечном цикле, ожидая сообщений в общей очереди.
- **Клиенты** (`Client.hpp`, `Client.cpp`) — независимые процессы, предоставляющие консольный интерфейс игрокам. Каждый клиент подключается к существующей разделяемой памяти, регистрируется с уникальным логином и взаимодействует с системой через меню.

- **Разделяемая память** (SharedTypes.hpp, SharedMemory.hpp, SharedMemory.cpp) — общая область памяти, содержащая структуру SharedMemoryRoot с очередью сообщений, слотами клиентов и массивами игр. Этот компонент обеспечивает высокоскоростное взаимодействие между процессами.

Все компоненты взаимодействуют через единую структуру данных, определённую в SharedTypes.hpp, которая включает типы сообщений (MsgType), состояния ячеек (CellState), кораблей (Ship) и игр (GameData). Синхронизация осуществляется с помощью POSIX мьютексов и условных переменных, также определённых в структуре разделяемой памяти.

Метод решения

Метод решения основан на использовании POSIX Shared Memory для реализации межпроцессного взаимодействия между сервером и клиентами. В файле SharedTypes.hpp определена центральная структура SharedMemoryRoot, содержащая:

- **Очередь сообщений** (Message queue[QUEUE_SIZE]) — циклический буфер для асинхронной передачи команд от клиентов серверу и обратно. Типы сообщений определены в перечислении MsgType и включают все возможные действия: регистрация (MSG_REGISTER), создание игры (MSG_CREATE), выстрел (MSG_SHOT) и др.
- **Слоты клиентов** (ClientSlot clients[MAX_CLIENTS]) — информация о каждом подключённом игроке, включая логин, условную переменную для ожидания ответов и текущий статус.
- **Игровые сессии** (GameData games[16]) — полное состояние каждой игры, включая поля игроков (board1, board2), массивы кораблей (ships1, ships2), статистику и временные метки.

Серверный процесс (реализованный в Server.cpp) работает по следующему алгоритму:

1. Инициализирует разделяемую память и создаёт необходимые объекты синхронизации.
2. Входит в основной цикл, ожидая сообщений через условную переменную server_cond.
3. При получении сообщения определяет его тип и вызывает соответствующий обработчик (handle_message()).
4. Обновляет состояние игр, отправляет ответы клиентам и синхронизирует изменения.

Клиентский процесс (Client.cpp) реализует:

1. Подключение к существующей разделяемой памяти.
2. Регистрацию с уникальным логином через сообщение MSG_REGISTER.
3. Взаимодействие с пользователем через контекстные меню (главное меню, меню расстановки, игровое меню).

4. Отправку команд в очередь и ожидание ответов через условные переменные.

Игровая логика инкапсулирована в классе `Game` (`Game.hpp`, `Game.cpp`), который отвечает за:

- Валидацию расстановки кораблей (проверка границ, пересечений, расстояний).
- Обработку выстрелов с определением попаданий, промахов и уничтожения кораблей.
- Управление очерёдностью ходов (правило дополнительного хода при попадании).
- Определение условия победы (уничтожение всех кораблей противника).

Синхронизация обеспечивается через мьютекс `mutex` в структуре `SharedMemoryRoot`. Каждая операция чтения или записи в разделяемую память предваряется захватом этого мьютекса, что предотвращает состояния гонки (race conditions). Условные переменные (`server_cond` и `cond` в каждом `ClientSlot`) используются для эффективного ожидания событий без активного опроса.

Обработка ошибок реализована на всех уровнях: проверка корректности входных данных (координаты в пределах 0-9, правильный формат команд), валидация игровых действий (очередность хода, завершённость расстановки), обработка исключительных ситуаций (отключение клиента, переполнение очереди).

Описание программы

Сервер (server)

Сервер запускается первым и выполняет следующие функции:

- Создаёт и инициализирует разделяемую память (если не существует).
- Устанавливает структуры данных: очередь сообщений, слоты клиентов, игровые сессии.
- Инициализирует мьютексы и условные переменные с атрибутами `PTHREAD_PROCESS_SHARED`.
- Ожидает команды от клиентов в бесконечном цикле, обрабатывая их в порядке поступления.
- Управляет жизненным циклом игр: создание, наполнение игроками, проведение игры, завершение и очистка.
- Обеспечивает целостность данных и соблюдение правил игры.

Клиент (client)

Клиентское приложение предоставляет пользователю консольный интерфейс с контекстными меню:

1. **Главное меню** (отображается когда игрок не в игре):

- Список игроков и игр (команда `list` → `MSG_LIST`)
- Создание публичной игры (ввод имени → `MSG_CREATE`)
- Присоединение к игре по имени или ID (`MSG_JOIN`)
- Приглашение другого игрока по логину (`MSG_INVITE`)
- Проверка приглашений
- Выход из системы (`MSG_QUIT`)

2. **Меню расстановки кораблей** (после входа в игру):
   - Ручное размещение: `place размер,x,y,ориентация` → `MSG_PLACE_SHIP`
   - Автоматическая расстановка: `auto` (алгоритм в `Client.cpp`)
   - Просмотр своего поля: `board` → `MSG_GET_BOARD`
   - Завершение расстановки: `ready` → `MSG_SETUP_COMPLETE`
   - Приглашение в текущую игру: `invite логин` → `MSG_INVITE_TO_GAME`
   - Выход из игры: `menu` → `MSG_LEAVE_GAME`
3. **Игровое меню** (после начала боя):
   - Сделать выстрел: ввод координат → `MSG_SHOT`
   - Просмотр своего поля → `MSG_GET_BOARD`
   - Просмотр поля противника → `MSG_GET_OPPONENT_BOARD`
   - Статус игры → `MSG_GAME_STATUS`
   - Сдаться → `MSG_SURRENDER`
   - Выйти в меню → `MSG_LEAVE_GAME`

Игровой процесс

Игра следует классическим правилам "Морского боя":

- Поле 10×10 клеток.
- Флот из 10 кораблей: 1×4, 2×3, 3×2, 4×1 клетки.
- Расстановка с расстоянием минимум 1 клетка между кораблями.
- Поочерёдные ходы с правом дополнительного хода при попадании.
- Отображение полей: своё поле показывает корабли, поле противника скрывает неподбитые корабли.
- Победа при уничтожении всех кораблей противника.

Особенности реализации

- **Автоматическая расстановка** использует алгоритм случайного размещения с проверкой корректности позиции.
- **Система приглашений** поддерживает два сценария: создание новой приватной игры и приглашение в существующую игру.
- **Визуализация** полей с помощью символов ASCII: `.` — пусто, `S` — корабль (на своём поле), `X` — попадание, `O` — промах, `#` — потопленный корабль.
- **Обработка отключений**: сервер обнаруживает неактивных клиентов и корректно завершает игры.
- **Масштабирование**: ограничение на 32 одновременных клиента и 16 активных игр (константы в `SharedTypes.hpp`).

Пример работы программы

Запуск сервера

Первым запускается сервер. Он создаёт разделяемую память и инициализирует все структуры данных:

```
$ ./server
=== SERVER RUNNING ===
Server: shared memory initialized
```

Сервер готов к приёму подключений клиентов и ожидает сообщений в бесконечном цикле.

Запуск клиентов и регистрация

Запускаем двух клиентов в разных терминалах. Первый игрок регистрируется как "Alice":

```
$ ./client
==================================================
ДОБРО ПОЖАЛОВАТЬ В МОРСКОЙ БОЙ!
==================================================
Введите ваш логин: Alice

[Регистрация...]

REGISTERED:OK
```

Второй игрок регистрируется как "Bob":

```
$ ./client
==================================================
ДОБРО ПОЖАЛОВАТЬ В МОРСКОЙ БОЙ!
==================================================
```

```
Введите ваш логин: Bob

[Регистрация...]

REGISTERED:OK
```

На сервере появляются соответствующие сообщения:

```
Registered client: Alice
Registered client: Bob
```

Создание и поиск игры

Alice создаёт публичную игру "Battle1":

```
==================================================
МОРСКОЙ БОЙ
==================================================
1 -Список игроков и игр
2 -Создать публичную игру
3 -Присоединиться к игре
4 -Пригласить игрока
5 -Проверить приглашения
6 -Выйти
Выберите действие: 2

Введите имя для новой игры: Battle1

GAME_CREATED:Публичная игра 'Battle1'создана (ID: 0)
Вы вошли в игру. Начинайте расстановку кораблей!
```

На сервере:

```
Public game 'Battle1'created by Alice (ID: 0)
```

Bob запрашивает список доступных игр:

```
==================================================
МОРСКОЙ БОЙ
==================================================
1 -Список игроков и игр
2 -Создать публичную игру
3 -Присоединиться к игре
4 -Пригласить игрока
5 -Проверить приглашения
6 -Выйти
Выберите действие: 1
```

```
=== ИГРОКИ ОНЛАЙН (2) ===
Alice [в игре]
Bob

=== ДОСТУПНЫЕ ИГРЫ (1) ===
Battle1 (ID: 0) -создатель: Alice

Присоединиться: join <имя_игры>или join <ID>
```

Bob присоединяется к игре по ID:

```
Выберите действие: 3

Введите имя или ID игры: 0

Вы присоединились к игре!
SHIP_PLACEMENT:
Разместите корабли: place размер,x,y,ориентация(H/V)
Корабли: 1x4,2x3,3x2,4x1
Пример: place 4,0,0,H
Когда готовы: ready
```

Alice получает уведомление:

```
OPPONENT_JOINED:Игрок присоединился
SHIP_PLACEMENT:
Разместите корабли: place размер,x,y,ориентация(H/V)
Корабли: 1x4,2x3,3x2,4x1
Пример: place 4,0,0,H
Когда готовы: ready
```

Фаза расстановки кораблей

Оба игрока начинают расставлять корабли. Alice использует автоматическую расстановку:

```
==================================================
РАССТАНОВКА КОРАБЛЕЙ
==================================================
Формат: размер,x,y,ориентация(H/V)
Пример: 4,0,0,H

Корабли для размещения:
1 авианосец (4 клеток)
2 линкора (3 клетки)
3 крейсера (2 клетки)
4 эсминца (1 клетки)
--------------------------------------------------
Команды:
```

```
auto -автоматическая расстановка
ready -готов к игре
board -посмотреть поле
invite <логин>-пригласить игрока в эту игру
menu -выйти в меню
-------------------------------------------------

Команда: auto

=================================================
АВТОМАТИЧЕСКАЯ РАССТАНОВКА КОРАБЛЕЙ
=================================================
Размещаем корабль: 4,0,0,H... Успешно
Размещаем корабль: 3,0,5,H... Успешно
Размещаем корабль: 3,0,8,H... Успешно
Размещаем корабль: 2,8,8,H... Успешно
Размещаем корабль: 2,5,5,V... Успешно
Размещаем корабль: 2,8,4,H... Успешно
Размещаем корабль: 1,6,0,H... Успешно
Размещаем корабль: 1,6,2,H... Успешно
Размещаем корабль: 1,3,2,H... Успешно
Размещаем корабль: 1,9,0,H... Успешно
-------------------------------------------------
РАССТАНОВКА ЗАВЕРШЕНА
Размещено кораблей: 10/10
Все корабли успешно размещены!

Показываем поле...
```

Alice смотрит своё поле:

```
Команда: board

YOUR_BOARD:
0  1  2  3  4  5  6  7  8  9
0  S  S  S  S  .  .  .  .  .  .
1  .  .  .  .  .  .  .  .  .  .
2  .  .  .  S  .  .  S  .  .  .
3  .  .  .  .  .  .  .  .  .  .
4  .  .  .  .  .  .  .  .  S  S
5  .  .  .  .  .  S  .  .  .  .
6  .  .  .  .  .  S  .  .  .  .
7  .  .  .  .  .  S  .  .  .  .
8  .  .  .  .  .  .  .  .  S  S
9  S  .  .  .  .  .  .  .  .  .
```

Bob размещает корабли вручную:

```
Команда: place 4,0,0,H
```

```
SHIP_PLACED:OK

Команда: place 3,0,5,H
SHIP_PLACED:OK

Команда: place 3,0,8,H
SHIP_PLACED:OK
```

После размещения всех кораблей Bob отправляет команду готовности:

```
Команда: ready

Отправляем 'ready'на сервер...

SETUP_COMPLETE:Waiting for opponent...
```

Когда Alice также отправляет "ready игра переходит в активную фазу:

```
Команда: ready

Отправляем 'ready'на сервер...

ВАШ ХОД! Make your move
```

Фаза боя

Игра начинается. Alice ходит первой:

```
========================================
ИГРА В ПРОЦЕССЕ
========================================
1 -Сделать выстрел
2 -Посмотреть свое поле
3 -Посмотреть поле противника
4 -Статус игры
5 -Сдаться
6 -Выйти в меню
----------------------------------------
Выберите действие: 1

Координаты выстрела (x,y): 5,5

Отправляем выстрел...

Ответ сервера получен

РЕЗУЛЬТАТ ВЫСТРЕЛА: MISS at 5,5
```

Bob получает уведомление и делает свой ход:

```
ПРОТИВНИК СТРЕЛЯЕТ: Alice at 5,5:MISS
ВАШ ХОД! Make your move

Выберите действие: 1

Координаты выстрела (x,y): 0,0

Отправляем выстрел...

РЕЗУЛЬТАТ ВЫСТРЕЛА: HIT at 0,0

ВАШ ХОД СНОВА! You hit! Shoot again
```

Завершение игры

После нескольких ходов Bob уничтожает последний корабль Alice:

```
РЕЗУЛЬТАТ ВЫСТРЕЛА: HIT at 9,0
==================================================
ПОБЕДА!
You won the game!
==================================================

FINAL_STATS:
Статистика:
Сбито кораблей: 10
Попаданий: 15
Промахов: 3
Игра завершена!
Вы победили!
```

Alice получает уведомление о поражении:

```
ПРОТИВНИК СТРЕЛЯЕТ: Bob at 9,0:HIT
==================================================
ПОРАЖЕНИЕ
You lost the game
==================================================

FINAL_STATS:
Статистика:
Сбито кораблей: 7
Попаданий: 10
Промахов: 8
Игра завершена!
Победил: Bob
```

Выход из системы

Игрок может выйти из системы:

```
==================================================
МОРСКОЙ БОЙ
==================================================
1 -Список игроков и игр
2 -Создать публичную игру
3 -Присоединиться к игре
4 -Пригласить игрока
5 -Проверить приглашения
6 -Выйти
Выберите действие: 6

Вы уверены? (да/нет): да

Выход...

==================================================
ИГРА ЗАВЕРШЕНА
Спасибо за игру!
==================================================
```

На сервере фиксируется отключение клиента:

```
Client quit: Alice
```

Выводы

В процессе выполнения курсового проекта я получил практический опыт проектирования и реализации клиент-серверной системы с использованием разделяемой памяти для межпроцессного взаимодействия.

Архитектура на основе shared memory - позволяет достичь высокой производительности за счёт минимальных накладных расходов на передачу данных между процессами. Преимущества: быстрое взаимодействие, простота синхронизации через мьютексы, единое представление данных для всех компонентов. Недостатки: ограничение на количество процессов, сложность масштабирования на несколько машин, требования к корректной синхронизации.

Клиент-серверная модель - обеспечивает четкое разделение ответственности: сервер как координатор и валидатор, клиенты как пользовательские интерфейсы. Преимущества: централизованное управление состоянием, безопасность (проверка действий на сервере), возможность добавления новых клиентов без изменения сервера. Недостатки: единая точка отказа, зависимость от доступности сервера.

Приобретенные навыки

- **Работа с POSIX shared memory** - освоил механизмы создания, отображения и управления разделяемой памятью в Linux

- **Межпроцессная синхронизация** - изучил использование мьютексов и условных переменных в многопроцессной среде
- **Проектирование протоколов взаимодействия** - разработал систему сообщений для клиент-серверного общения
- **Игровая логика и бизнес-правила** - реализовал полный цикл игры "Морской бой"с соблюдением всех правил
- **Консольный пользовательский интерфейс** - создал интуитивно понятные меню для взаимодействия с игроком

Заключение

Использование разделяемой памяти для реализации многопользовательской игры доказало свою эффективность для локальных систем. Такой подход особенно полезен в случаях, когда требуется:

- Высокая производительность при интенсивном обмене данными
- Простота отладки и мониторинга (все данные в одном месте)
- Минимальные задержки между клиентами и сервером

Полученные знания и навыки позволяют создавать высокопроизводительные многопользовательские приложения с четкой архитектурой и надежной синхронизацией. Проект демонстрирует, что даже классические задачи (такие как "Морской бой") могут быть реализованы с использованием современных технологий межпроцессного взаимодействия, что открывает возможности для создания более сложных распределенных систем в будущем. Особенно ценным оказался опыт работы с реальными проблемами синхронизации, обработки отказов и проектирования отказоустойчивых систем. Эти компетенции критически важны для разработки промышленного программного обеспечения.
